Biol. 15:102-111(1995).

FUNCTION: TRANSCRIPTION FACTOR CAPABLE OF IN RICH REPEATS (GA REPEATS). NECESSARY FOR THE ADENOVIRUS E4 GENE.
SUBUNIT: HETEROTETRAMER OF TWO ALPHA AND TWO SUBCELLULAR LOCATION: Nuclear.

SIMILARITY: BELONGS TO THE ETS FAMILY.
SIMILARITY: CONTAINS 1 POINTED (PNT) DOMAIN.
                                                                                 PF00178;

                                                                                                                                                                                                                                                                                                     The present sequence encodes a chicken c-erg protein. The specification also describes a chicken C-II protein (AAYOI520) which has cell calcification inhibiting activity and a cell calcification inhibiting agent containing c-erg protein. The proteins are used for measuring the calcification of a cell, for diagnosing arthritis deformans or ossification of spinal column ligament.
                                                                                                                                                                                                                                                                                                                                                                          An active protein for inhibiting cell calcification - useful fineasuring the calcification of a cell, for diagnosing arthritis deformans or ossification of spinal column ligament

         The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), by detecting the level of expression and comparing CC the expression level in an unactivated CC (GC, where differential expression of GS is indicative of GCA. CC Also included are modulating (M2) GA by contacting GC with an agent CC that alters the expression of at least one gene in GS; (2) screening (M3) CC chronic) in a tissue, an altergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC chronic) in a tissue, an altergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC chronic) in a tissue, an altergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC chronic) in a tissue, an altergic response in a subject, exposure of a consideration (M5) an inflammation (especially chronic) or in a tissue, an altergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an altergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, an altergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue having constanting GA; M3 is useful for detecting a tissue having condulating GA; M3 is useful for screening an agent capable of modulating CC detecting an inflammation in a tissue; M4 is useful for detecting an inflammation in a figure in a pathogen in a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic detecting an inflammation in a tissue; M4 is useful for detecting GC detecting an allergic response in a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic detecting GC detecting GC detection and inflammation in a tissue, an allergic detecting GC detection and in a detection in a detection in a dete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease Crohn's disease; ulcerative collitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1448

encoded by them and antibodies against treatment of vascular disease caused by γď

The present invention provides the protein and coding sequences number of human shear stress response proteins. These are useful diagnosis, treatment and screening of vascular diseases caused t arteriosclerosis, including heart failure, post-PTCA restenosis aused by of. in the a

The intron-exon junctions of the human Ews gene and the Hum-F11-1 gene have been sequenced (see AAQ50646 and AAQ50662, respectively). The different fusion products which could be formed by fusing exons from the two genes, as happens after specific chromosomal translocations, can be predicted (see AAQ50671-Q50678). The sequence
